

Where to Lubricate the BERNINA Hook with 9mm 7 and 5 Series?

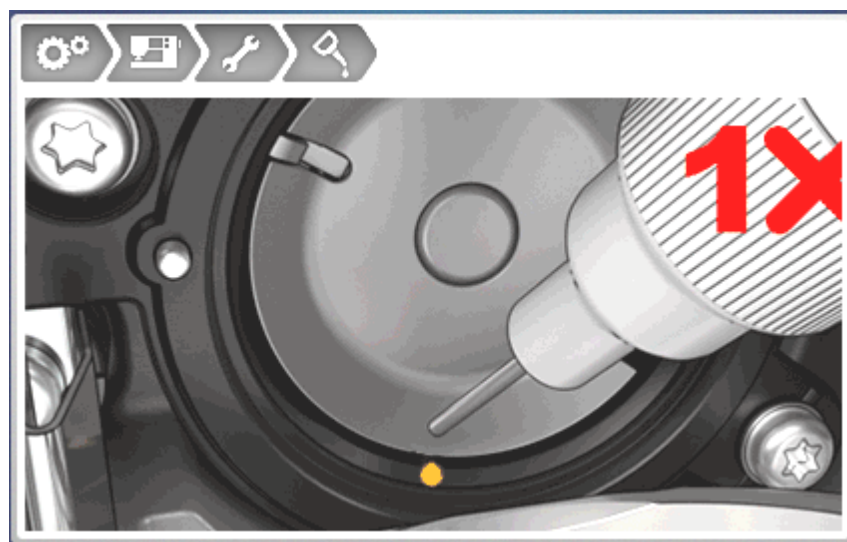

There seems to be some confusion where to lubricate this hook system. Bernina has just informed dealers of a new way of doing this. In the current user manual Bernina shows to lubricate the reservoir. With the latest Firmware updates for the 7/5 Series machines the lubrication animation shows how to lubricate the actual shuttle race.

It is recommended to use the new process to lubricate the shuttle race directly. Bernina has had many cases reported where extensive reservoir filling caused oily threads and discoloration of the fabric.

The old way shown like this:
